## OPTN Policy Changes: HIV, HBV, and HCV Testing, Vaccination, Consent, and Specimen Storage Aligning With 2020 PHS Guideline

| Requirements                                      | Timeframe  | Policy Effective Date |
|---|--|-----------------------|
| All Deceased Donors                               |  |                       |
| HIV: NAT and anti-HIV testing                     | Specimen must be drawn   | March 1, 2021         |
| HBV: NAT, total anti-HBc, and HBsAg testing       | within 96 hours prior to                                       | 11101011 1, 2021      |
| HCV: NAT and anti-HCV testing                     | organ recovery   |                       |
| nev. NAT and and-nev testing                      | organitecovery   |                       |
| Blood specimen to be stored for 10 years that     | Specimen must be drawn within 24 hours prior to organ recovery | March 1, 2021         |
| can be used for NAT or serology testing if future |  |                       |
| disease investigation needed                      |  |                       |
| All Living Donors                                 |  |                       |
| HIV: NAT and anti-HIV testing                     | Specimen must be drawn within 28 days prior to                 | March 1, 2021         |
| HBV: NAT, total anti-HBc, and HBsAg testing       |  |                       |
|   |  |                       |
| HCV: NAT and anti-HCV testing                     | organ recovery   |                       |
| Blood specimen to be stored for 10 years that     | Specimen must be drawn   | June 1, 2021          |
| can be used for NAT or serology testing if future | within 24 hours prior to                                       |                       |
| disease investigation needed                      | organ recovery   |                       |
| Consent must be obtained for storage as part of   | Overall living donor   | June 1, 2021          |
| overall living donor consent                      | consent must be obtained                                       | Julie 1, 2021         |
| overall living donor consent                      | prior to organ recovery  |                       |
|   | prior to organizecovery  |                       |
| All Candidates                                    |  |                       |
| Assess need for HBV vaccination.                  | During medical evaluation                                      | Upon programming      |
| Document and report reason if vaccination         |  | and notice to         |
| cannot be initiated or completed.                 |  | members               |
| HIV: CDC testing algorithm                        | Specimen must be drawn   | March 1, 2021         |
| HBV: total anti-HBc, HBsAb, and HBsAg testing     | after hospital admission<br>for transplant but before          | ,                     |
| HCV: NAT and anti-HCV testing                     |  |                       |
|   | first anastomosis  |                       |
|   | 4.0  |                       |
| If donor has risk criteria for HIV, HBV, or HCV,  | After organ offer but  | March 1, 2021         |
| then candidate or agent must be informed.         | before organ transplant  |                       |
| Specific informed consent no longer required.     |  |                       |
| All Recipients                                    |  |                       |
| HIV NAT testing                                   | 4-8 weeks (28-56 days)<br>after transplant                     | March 1, 2021         |
| HBV NAT testing                                   |  |                       |
| HCV NAT testing                                   |  |                       |
|   |  |                       |
