Introduction
The OPTN Living Donor Committee (the Committee) met via Citrix GoTo Meeting teleconference on 11/10/2021 to discuss the following agenda items:

1. Living Donor Exclusion Criteria Proposal

The following is a summary of the Committee’s discussions.

1. Living Donor Exclusion Criteria Proposal

The Committee reviewed their project regarding living donor exclusion criteria.

Summary of discussion:

The Committee proposed modifying four exclusion criteria with the following language:

- Active, or incompletely treated malignancy that requires treatment, other than surveillance, or more than minimal risk of transmission
- High suspicion of donor inducement, coercion, or other undue pressure
- High suspicion of knowingly acquiring, receiving, or otherwise transferring anything of value in exchange for any human organ
- Type 1 diabetes
- Type 2 diabetes where an individualized assessment of donor demographics or comorbidities reveals evidence of end organ damage or lifetime risk of complications

The Committee unanimously voted to send the proposal Modify Living Donor Exclusion Criteria to Winter 2022 Public Comment.

The Committee emphasized that the intent of the language regarding type 2 diabetes is to acknowledge that one of the most important considerations of evaluating and accepting type 2 diabetic potential living donors is lifetime risk of complications. The Committee noted that the cumulative lifetime risk would be much lower for older individuals than for younger individuals. The Committee agreed that lifetime risk is a well-known term in the transplant community and that it is discussed frequently in conjunction with kidney disease.
