

# Median MELD at Transplant Around Liver Donor Hospitals and Median PELD at Transplant Within the Nation

Median transplant scores are used to assign exception scores for liver candidates on the waiting list. They are updated twice a year.

Median MELD scores are calculated for each donor hospital in the United States. They are based on a 365-day cohort of liver recipients age 12 or older, transplanted at hospitals within a radius of 150 nautical miles from the donor hospital. The following transplant events are excluded from the calculation:

- Transplants of Status 1A and 1B candidates
- Living donor transplants
- Transplants involving cardiac death donors
- Transplants involving a distance of 500 nautical miles or more between the donor and recipient hospital

Median PELD at transplant is calculated on a national basis. It is based on a 365-day cohort of liver recipients with a PELD score and who were younger than age 12 at time of transplant. As with the median MELD scores, the following transplant events are excluded from the calculation:

- Transplants of Status 1A and 1B candidates
- Living donor transplants
- Transplants involving cardiac death donors
- Transplants involving a distance of 500 nautical miles or more between the donor and recipient hospital

**Table 1. Median MELD at Transplant by Donor Hospital, 09/01/2023 - 08/31/2024**
