Median MELD at Transplant by Donor Service Area and Median PELD at Transplant Within the Nation

Updated: September 18, 2019

Median transplant scores are based on a 365-day cohort of transplant recipients that excludes Status 1A and Status 1B transplants, as well as transplants from living donors, cardiac death donors, and donors from outside the region of the recipient transplant hospital (national shares). These scores are updated every 180 days, and are used to assign exception scores for liver candidates on the waiting list.

Median PELD at transplant is calculated from all transplant recipients in the cohort with a PELD score, age under 12 at time of transplant.

Median MELD at transplant is calculated for each liver transplant program from all transplant recipients in the cohort with a MELD score, age 12 and older at time of transplant, from all programs within the Donor Service Area (DSA).

As per Policy 9.45D, median MELD at transplant is calculated for each liver transplant program within OPTN Region 9 from all transplant recipients in the cohort with a MELD score, age 12 and older at time of transplant, from all programs within the Region. The transplant programs to which this applies are marked below with an asterisk.
